Priorities

- Approved by regulatory agencies as safe (for animals & for humans administering) & effective
- Permanent best. Also opportunity for long-term (3+ years) products
- Single injection or treatment
- Products for male and female, dogs and cats
- Documented effects on behavior and health
- Can be provided at affordable rates for use in indigent or low-income client populations

Challenges

- Financing
- A long road from idea to product – must sustain funding for many years
- Regulatory hurdles, worldwide
- Not just safe and effective, but can manufacture at the scale needed, at reasonable cost
- Understanding risk/benefit (all approaches have risks)
- Changing the paradigm from surgery – teaching old dogs new tricks!
